DETAILED ACTION

Response to Arguments

Applicant's arguments filed 1/15/2004 have been fully considered but they are not persuasive.

Election/Restrictions

Newly submitted claims 14-16 and 19-21 are directed to an invention that is independent or distinct from the invention originally claimed for the following reasons:

- I. Claims 12-13 and 17-18, drawn to a method of recording an image by not utilizing error correction, classified in class 386, subclass 46.
- II. Claims 14-16 and 19-21, drawn to a method of recording an image by adding error correction code to the frames to be recorded, classified in class 386, subclass 124.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of recording an image in a timely manner, whereby invention I records in a timely manner by preventing error

Art Unit: 2616

correction from taking place as opposed to invention II where error correction code is added to frames to be recorded.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Since applicant has received an action on the merits for the originally presented invention, this invention has been constructively elected by original presentation for prosecution on the merits. Accordingly, group II (claims 14-16 and 19-21) is withdrawn from consideration as being directed to a non-elected invention. See 37 CFR 1.142(b) and MPEP § 821.03.

Claim Rejections - 35 USC § 102

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 12-13 and 17-18 are rejected under 35 U.S.C. 102(b) as being anticipated by Tamegai (US5442614).

Regarding claims 12 and 17, Tamegai shows in fig.6 where there is no defect list (s3) therefore there would be no need for an automatic exchange function (col.7 ll.21-24)

Tamegai also discusses setting a predetermined number of retry times, which if set to zero, would result in not executing a re-reading operation

Allowable Subject Matter

Claims 13 and 18 are allowed. Joyce et al. (US4641305) discloses the prevention of re-reading an image frame when a read error is detected. However, Joyce does not disclose the continuous display of a previous frame when a read error is detected

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
